SUMMARY

Full-stack software engineer with production experience across FinTech, enterprise SaaS, and health-tech specializing in distributed systems, REST/GraphQL APIs, and cloud infrastructure on AWS. Sole architect and publisher of HealthW AI, live on the App Store and Google Play. M.S. Computer Science, CSUDH STEM OPT authorized through February 2028; eligible for H-1B sponsorship.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, Python, Java
Frontend	React.js, React Native, Next.js, Redux, Tailwind CSS
Backend	Node.js, Express.js, REST APIs, GraphQL, FastAPI, WebSockets, Microservices
Databases	PostgreSQL, MongoDB, MySQL, Redis, Firebase Firestore
Cloud & DevOps	AWS (EC2, S3, Lambda, EKS, CloudWatch), Docker, Kubernetes, Terraform, GitHub Actions, CI/CD
AI / ML	OpenAI API (GPT-4), LangChain, RAG Pipelines, Pinecone, Hugging Face
Security	JWT, OAuth2, RBAC, API Rate Limiting, HTTPS/TLS
Practices	System Design, Distributed Systems, Scalability, TDD, Agile/Scrum, Code Review

PROFESSIONAL EXPERIENCE

Software Engineer · Snowflake · Full-time

Jan 2025 – Present · Santa Ana, CA

- Owned end-to-end delivery of full-stack features on Snowflake's enterprise data platform using React.js, TypeScript, Node.js, and Express.js from design through production deployment and monitoring on AWS.
- Designed and shipped an AI-powered semantic search engine using OpenAI GPT-4 and LangChain, enabling intelligent retrieval across large unstructured document corpora.
- Containerized backend services with Docker, orchestrated on Kubernetes (AWS EKS), and built GitHub Actions CI/CD pipelines with automated test gates and blue-green deployments.
- Architected fault-tolerant REST and GraphQL APIs with JWT/OAuth2, rate limiting, versioning, and schema validation — sustaining low-latency P99 response times under high-concurrency traffic.
- Instrumented services with CloudWatch, distributed tracing, and structured logging to improve MTTD and enable automated alerting on error-rate and throughput anomalies.
- Expanded Jest and Mocha test coverage across React.js and Node.js codebases, reducing defect escape rate across bi-weekly Agile releases.

Software Engineer · Charles Schwab · Part-time

Apr 2023 – Dec 2024 · Carson, CA

- Built and maintained production full-stack applications using React.js, Node.js, and Express.js for high-availability financial operations including brokerage management, trade reporting, and internal tooling.
- Optimized API performance through HTTP caching, payload compression, and connection pooling between trading front-ends and backend financial data services.
- Automated IT provisioning in Python with ServiceNow and Active Directory integration, eliminating manual overhead across a large fleet of managed assets.
- Administered Azure AD, RBAC policies, and security group permissions, enforcing least-privilege access and reducing misconfiguration incidents.
- Maintained Jest unit and integration test coverage across financial-critical services to meet compliance-aligned quality standards.

Associate Software Engineer · Capital One · Full-time

Dec 2020 – Jul 2022 · Chennai, India

- Engineered full-stack banking applications using React.js, TypeScript, Node.js, and Express.js, powering high-traffic internal platforms for customer support and operations teams.
- Improved P95 API response time by implementing Redis caching and optimizing query execution plans and indexes on high-frequency REST endpoints.
- Integrated third-party REST APIs and enterprise CRM systems for a large-scale agent team using backward-compatible versioning for zero-downtime deployments.
- Optimized MySQL and PostgreSQL schemas through composite indexing, execution plan tuning, and connection pool configuration to sustain high-volume transactional throughput.

- Authored Jest unit, integration, and contract test suites, reducing regression rate and enabling a consistent fortnightly release cadence.

FEATURED PROJECT

HealthW AI — Production Cross-Platform Mobile Application · Sole Architect & Developer [Live on App Store & Google Play](#)

Stack: React Native · Node.js/Express.js · MongoDB · Firebase · AWS (EC2, S3, Lambda) · OpenAI GPT-4 · Redux · JWT/OAuth2 · APNs/FCM

- Architected and launched a production cross-platform mobile app for iOS and Android as sole developer — owning every layer from database design and API architecture through App Store and Google Play release.
- Designed a stateless Node.js/Express.js backend with RESTful API architecture, JWT/OAuth2 with refresh token rotation, and a MongoDB schema with compound indexes for multi-tenant, high-read workloads.
- Built real-time sync via Firebase Firestore with optimistic UI updates and cross-platform push delivery through APNs and FCM, sustaining sub-second latency across concurrent sessions.
- Integrated OpenAI GPT-4 with a custom prompt orchestration layer to deliver personalized health coaching, meal plans, and wellness insights via low-latency streaming responses.
- Provisioned AWS infrastructure (EC2, S3, Lambda) with Cloudinary CDN for media delivery; independently executed App Store and Google Play review and release pipelines.

CarApp — AI-Powered Vehicle Insights Mobile Application · Sole Developer [Live on Google Play](#)

Stack: React Native · Expo Router · TypeScript · OpenAI API (GPT-4o-mini) · AsyncStorage · REST APIs · Mobile UI/UX

- Engineered a production React Native mobile application with Expo Router for type-safe navigation, delivering AI-powered vehicle insights, engine specifications, horsepower and torque data, and AI-generated heritage history from a unified cross-platform codebase.
- Integrated OpenAI GPT-4o-mini as an embedded AI mechanic assistant (MecAi) — orchestrating prompt context, managing async API calls, and streaming real-time vehicle diagnostics and maintenance recommendations.
- Architected an async-first local data layer using AsyncStorage for persistent offline-capable state alongside REST API integration for live vehicle data, ensuring responsive UI performance under variable network conditions.
- Delivered a performance-optimized dark-mode mobile UI with cross-platform component architecture; independently executed the full Google Play review, approval, and release pipeline.

EDUCATION

Master of Science — Computer Science Aug 2022 – Dec 2024
California State University, Dominguez Hills (CSUDH) · Carson, California

STEM OPT authorized through February 2028 · Eligible for H-1B sponsorship · Open to relocation
